El Velociraptor

El Velociraptor existió hace aproximadamente 75 millones de años en Mongolia y China. El Velociraptor fue un dinosaurio relativamente pequeño, de aproximadamente 1,8 m de largo, pero era capaz de correr hasta 100 km/h. Tenía una cabeza larga terminada en forma de un tubo achatado, a diferencia de la mayoría de los demás dinosaurios que tenían cabezas cortas. Tenía pequeñas garras en los pies, con una uña larga de 15 cm el dedo medio.

Los Velociraptores fueron criaturas feroces e inteligentes que cazaban en grupos. No tenían dificultad alguna al atacar dinosaurios más grandes por estar provistos de garras duras y mortales que usaban como armas.

Un reciente hallazgo en Mongolia muestra a un Velociraptor trabado en batalla con un dinosaurio cornudo, lo que sugiere que ocurría una terrible lucha. El Velociraptor había agarrado al dinosaurio cornudo por la coraza cefálica y le tenía incrustadas en el cuerpo las garras encorvadas de sus pies.

Velociraptor

Velociraptor lived approximately 75 million years ago in Mongolia and China. Velociraptor was a relatively small dinosaur about 1,8 m. (6 ft) long, but was capable of running up to 100 km/h. (60 mi/h). It had a long head ending in a flat snout, unlike most other dinosaurs that had short heads. Its feet had small claws, with a 15 cm (6 in.) long claw on its middle toe.

Velociraptors were intelligent ferocious creatures that hunted in groups. With the size of their herd and deadly claws for weapons, they had no trouble attacking dinosaurs larger than themselves.

A recent find in Mongolia shows a Velociraptor locked in battle with a horned dinosaur. It seemed that a terrible struggle had taken place. Velociraptor grabbed the horned dinosaur's head shield while the sickle claws on its feet were digging into the other dinosaur.

Velocirattore

Il velocirattore viveva circa 75 milioni di anni fa in Mongolia e in Cina. Era un dinosauro di dimensioni relativamente piccole, circa 1,80 metri di lunghezza, ma era capace di correre ad una velocità di 100 Km. orari. A differenza della maggior parte dei dinosauri, le cui teste erano corte, aveva una lunga testa che finiva con un muso piatto. I piedi erano muniti di piccoli artigli e di un artiglio lungo 15 cm. sul dito medio.

Il velocirattore era un creatura feroce e intelligente che cacciava in gruppo. Con i suoi grandi branchi e i suoi artigli mortali, non aveva difficoltà ad attaccare dinosauri anche più grossi di sé.

Una recente scoperta in Mongolia ha rivelato un velocirattore in lotta serrata con un anchilosauro. Deve essere stata una lotta feroce. Il velocirattore aveva acchappato lo scudo cefalico dell'anchilosauro mentre affondava gli artigli a falchetto dei suoi piedi nel corpo del nemico.

Velociraptor

Le Velociraptor vivait en Mongolie et en Chine il y a environ 75 millions d'années. C'était un dinosaure relativement petit, mesurant environ 1,80 m de long, mais capable de courir à une vitesse pouvant atteindre 100 km/h. Contrairement à la plupart des autres dinosaures qui avaient une petite tête, le Velociraptor avait une tête longue, laquelle se terminait par un museau plat. Ses pattes étaient garnies de petites griffes, sauf pour le doigt du milieu qui avait une griffe de 15 cm de long.

Les Velociraptors étaient des créatures féroces et intelligentes, qui chassaient en groupes. Avec leurs terribles griffes et en raison de la taille de leurs troupeaux, ils n'avaient aucun problème à s'attaquer à des dinosaures plus gros qu'eux.

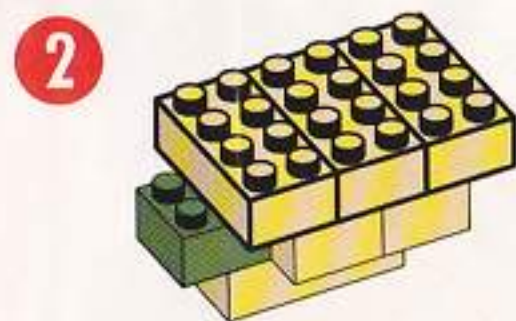

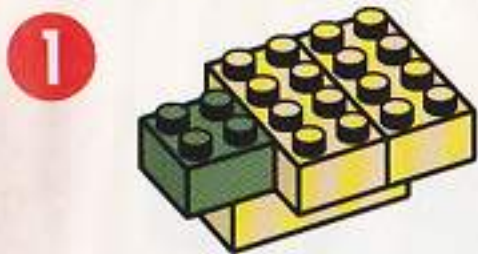

On a récemment découvert en Mongolie un Velociraptor aux prises avec un dinosaure à corne pendant une bataille. Il semblait qu'une lutte terrible avait dû avoir lieu entre les deux animaux. Le Velociraptor était agrippé au bouclier de la tête du dinosaure à corne, les griffes en faucille de ses pattes étant enfoncées dans l'autre dinosaure.

Velociraptor

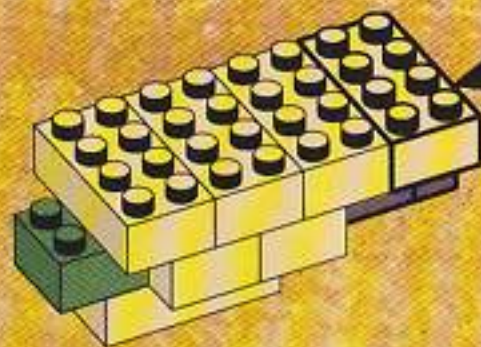

Der Velociraptor lebte vor ungefähr 75 Millionen Jahren in der Mongolei und China. Der Velociraptor war ein relativ kleiner Dinosaurier von ungefähr 1,8 m Länge, aber er konnte beim Laufen eine Geschwindigkeit von bis zu 100 km/h erreichen. Sein langer Kopf endete in einer flachen Schnauze, im Gegensatz zu anderen Dinosauriern, die einen kurzen Kopf hatten. Seine Füße hatten kleine Krallen, mit einer 15 cm langen Kralle an seinem mittleren Zeh.

Velociraptoren waren intelligente, grimmige Tiere, die in Gruppen jagten. Sie hatten aufgrund ihrer Herdengröße und den Waffen ihrer tödlichen Krallen keine Schwierigkeiten, Dinosaurier, die größer als Sie selbst waren, anzugreifen.

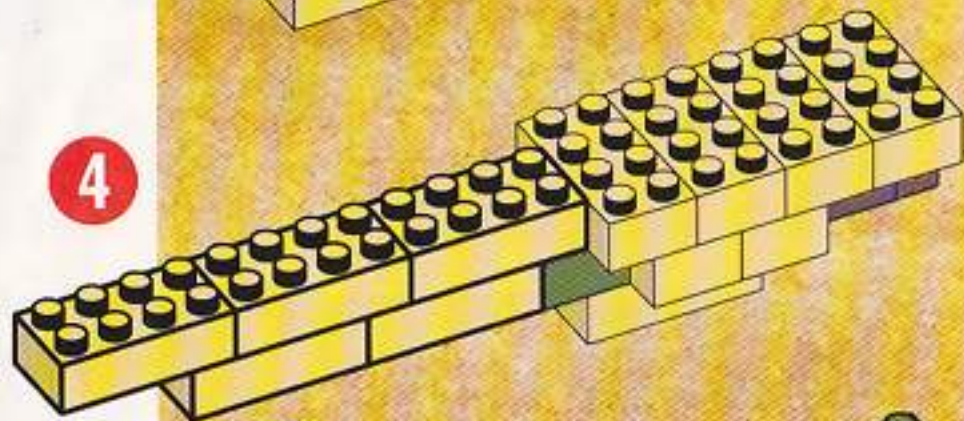

Vor kurzem wurde in der Mongolei ein Velociraptor gefunden, der mit einem Horn dinosaurier in einen Kampf verwickelt war. Es sieht so aus, als ob ein schreckliches Ringen stattgefunden hat. Der Velociraptor hatte den Kopfschild des Horn dinosauriers gepackt, während sich die Sichelkrallen seiner Füße in den anderen Dinosaurier gruben.
